DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement (IDS) submitted on April 2, 2003 and July 7, 2003 is acknowledged and has been considered by the Examiner.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 2, 9, 11-18, 21, and 26-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pajala Patent Number 4,796,402 in view of Toshio Patent Number 4,169,688.

Pajala '402 teaches all the limitations of the above claims except the panels with identical profiles on all edges, outwardly tapering channel and the specific thickness ranges from about .240 inches to about .320 inches. Pajala '402 teaches a rectangular flooring panels (see Figure 1) with a substantially constant thickness, a top surface (1) longer than bottom surface (3) (see Figure 1), bottom surface (3) is coextensive with substrate at the ends, middle substrate (2) made of made of a wood or plastic (column 2, lines 1-5), height or thickness within range of 16-18 mm but can be considerably less depending on the given parameters (column 1, lines 45-55), a groove in middle substrate extending the length of the panel, and angled portions on the profiles. Toshio

'688 teaches a flooring panel (2) with identical profiles on all edges of the panel (see Figure 1) with receiving grooves (3) on all edges, channels (9) that are outwardly tapering (column 3, lines 24-26) running the length of the bottom surface, and both channels and grooves meeting traverse on adjacent edges. It would have been obvious for one skilled in the art at the time the invention was made to modify the Pajala '402 reference as taught by the Toshio '688 to provide identical profiles with grooves, since it is held to be within the skill of a worker in the art to select panels edges with recesses and grooves or just recesses alone as a matter of obvious design choice. It would have been obvious for one skilled in the art at the time the invention was made to provide the panels in the thickness range of .240 inches to about .320 inches, since it is held to be within the skill of a worker in the art to vary the thickness of the panels as a matter of obvious design choice requiring only routine skill.

Response to Arguments

4. Applicant's arguments with respect to claims 2, 9, 11-18, 21, and 26-28 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
